3000	ANT QN RAIL	V
	CDOWO 2873C, 1038t. CDOWO 2873C, 1038t.	
BRI	Description to 3th School Ash School	C
AO 13.	There is a antion your baccony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets	>
	exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.	
BR13CD	Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left .Your task is to find and return the integer value representing how many times the ant reaches back to original starting position. Note:	2
	Note:	
SCDOAO?	Assume 1-based indexing Assume that the railing extends infinitely on the either sides	2
	Input Format:	
3821	input1 : An integer value N representing the number of moves made by the ant.	0
0.0	input2 : An integer value in representing the number of moves made by the ant. input2 : An integer array A consisting of the ant's moves towards either side Sample Input)
	Sample Input	
300	5	(

```
def count_returns_to_start(N, A):
    current_position = 0
    return_count = 0

for move in A:
        current_position += move
        if current_position == 0:
            return_count += 1

    return return_count

# Example usage:
N = int(input())
A = list(map(int,input().split())) # Example moves
    result = count_returns_to_start(N, A)
    print(result) # Output: 3
